Experience

Integrations Engineer, M32.ai 12/2025 – 08/2026 | Remote

- **Make.com:** Built a connector app from scratch, implementing OAuth2 authorization, webhook and polling triggers, and actions to expose M32 capabilities through automated workflows.
- **Clio:** Integrated two-way contact synchronization and appointment booking, rescheduling, and cancellation actions.
- **Athenahealth / eClinicalWorks:** Integrated both through NexHealth for patient lookup, appointment booking, and availability checks across AI Voice Reception and Chat Agent.
- **Gmail:** Built the email channel for the AI front desk using Pub/Sub notifications for event-driven email processing and automated AI replies within existing customer threads.
- **Cloudbeds:** Integrated guest lookup, room availability, and reservation booking across AI Voice Reception, Chat Agent, and Flow Builder, enabling end-to-end hotel booking workflows.
- **Stripe:** Integrated Stripe using Connect OAuth, webhook signature verification, and multi-account support, and exposed subscription, invoice, and plan management actions to the chat agent.
- **Google Ads / Meta Ads:** Added server-side conversion tracking with OAuth onboarding and async postbacks to Google Ads and Meta Conversions API on captured CRM leads.
- **Instagram / Facebook Automation:** Built a workflow manager with keyword-based comment triggers, public replies, direct messages, and scheduled follow-ups for automated customer engagement.
- **YouTube Automation** : Built comment automation with keyword-based triggers and public replies using a polling worker for new video comments.

Software Developer, Vodex.AI 08/2024 – 11/2025

- Built APIs to fetch events, verify users, check available slots, and book meetings using **Cal.com** .
- Integrated **Gmail** OAuth for user authentication and **Google Sheets** APIs to fetch, update, and read account-wide data in batches.
- Connected **HubSpot** CRM using OAuth and APIs for seamless data syncing.
- Implemented Redis caching with task queues (**BullMQ**) to reduce database load on cached collections, improving system performance by 30%.
- Developed middleware with JWT for user authentication.
- Developed dynamic workflows for meeting booking, API calls, post-processing, and email notifications

Associate II Software Engineer, Capgemini Engineering 07/2022 – 08/2024

- Added **asynchronous functionality** in Node.js for efficient message auditing and monitoring.
- Stored audit data in **BigQuery** for easier data analysis and reduced logging costs.
- Built and optimized **JSON-based RESTful APIs** in Node.js to improve data handling and lower client processing costs.
- Standardized **API templates** and created utility functions for smooth data transformation and backward compatibility.

Education

Bachelor of Technology, Presidency University 08/2018 – 07/2022 | Bengaluru, India

- **CGPA : 7.81**

Skills

NodeJs • SQL • Python • Git • MongoDb • Docker • Redis
